CS241#20 – Deadlock II, Dining Philosophers

The _____ conditions for deadlock are:

_____: "A process is currently holding at least one resource and requesting additional resources which are being held by other processes."

_____:"There is a set of waiting processes, such that P_1 is waiting for a resource held by P_2, P_2 is waiting for a resource held by P_3 and so on until P_N is waiting for a resource held by P_1."

_____:"A resource can be released only voluntarily by the process holding it, after that process has completed its task"

_____:"At least one resource must be held in a non-shareable mode"

Three gardeners visit the garden shed pick up their desired tools for the day. There is a potential for deadlock. Fortunately they know about the C_____ conditions! Find four ways to solve the problem (break one condition each time). Name which condition you break in each case.

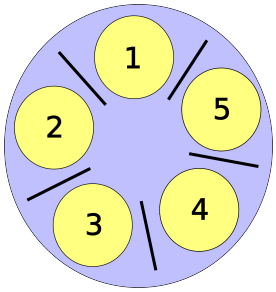
Remember Mergesort? How can you implement parallel Mergesort? Explain what synchronization calls you will use and when.

What is the Dining Philosophers problem?



Candidate Solutions:
1. "Pick up left chopstick. Pickup right chopstick. Eat. Release both."

2. "Pick up right. Pick up left. Eat. Release both"

3. "Eat when I tell you"

4. "Pick up left chopstick. Try to pickup right chopstick (Fail? release both and restart). Eat. Release both."
