1 2 3 (/course/cs357-f15/flow-session/74246/0/) (/course/cs357-f15/flow-session/74246/1/)
4 5 (/course/cs357-f15/flow-session/74246/3/) (/course/cs357-f15/flow-session/74246/4/) (/course/cs357-f15/flow-session/74246/5/)
6 7 (/course/cs357-f15/flow-session/74246/6/) (/course/cs357-f15/flow-session/74246/7/) (/course/cs357-f15/flow-session/74246/8/)

More Rolling and Flipping

Let's put this together.

```
ntests = 10  
tests = np.array([ flip() * dice() for n in range(ntests)])
```

Now, add:

```
total = tests.cumsum()
```

Now what? We want to look at the trend over a **bunch** of simulations.

Try rolling and flipping 100 times. And perform say 20 simulations.

What does the plot look like?
